WARP Vs Salary:

HOW TO WIN IN MAJOR LEAGUE BASEBALL

Jeff Ragauskis, Tyson Herrin, Damien Franco, Will Partain

TAKE ME OUT TO THE BALLGAME...

- Confession time
- A little bit of history
- CBA
- WARP...What is it good for? Absolutely everything.

THE MAIN EVENT

$$bWAR = \left(P_{runs} - A_{runs}
ight) + \left(A_{runs} - R_{runs}
ight)$$

The term $P_{runs} - A_{runs}$ may be calculated from the first five factors, and the other term from the remaining factor. [12]

Batting runs depends on weighted Runs Above Average (wRAA), weighted to the offense of the league, and is calculated from wOBA.^[13]

$$wRAA = \frac{wOBA - .320}{1.25} * (AB + BB + HBP + SF + SH)$$

where

$$wOBA = \frac{(\alpha_1*uBB + \alpha_2*HBP + \alpha_3*1B + \alpha_4*2B + \alpha_5*3B + \alpha_6*HR + \alpha_7*SB - \alpha_8*CS)}{(AB+BB-IBB+HBP+SF)}$$

QUESTIONS TO BE ANSWERED

- Does increasing payroll lead to success?
- Is WARP more effective when it comes to building a championship team?
- Are there other variables that may affect the success of a team?
